## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gilding (4,049,506) in view of Evans (4,950,365). Gilding teaches preparing a wire bonding capillary by providing a wire bonding capillary for pressing wire against an electrode pad comprising a capillary tip having a pressing face (Figure 3, item 13); and coating all of the face of the tip is coated with a layer of Nickel or gold (Figure 3, Item 14 and Column 5, Lines 25-34), Gilding does not teach the coating to be poly-p-xylylene. Evans teaches using a the use of a poly-p-xylylene (Column 3, Line 59 to Column 4, Line 30). It would have been obvious to one of ordinary skill in the art at the time of the invention to replace the coating of Gilding with the parylene coating in order to obtain good corrosion resistance (see Evans column 3, Lines 59-65). While the examiner agrees that the polymer coating will likely wear off the surface of the capillary tip during its first use, it is the examiner's position that, in the time just prior to the polymer coating wearing away, Gilding in view of Evans meet the claim limitation of "coating all of the pressing face of said capillary."

### ***Response to Arguments***

Applicant argues there is no motivation to combine Gilding and Evans because neither reference deals with the problem solved by applicant. The examiner Disagrees. The prior art references need not be combined for same problem recognized by the applicant. See In re Beattie, 974 F.2d 1309, 1312, 24 USPQ2d 1040, 1042 (Fed. Cir. 1992). That is, motivation in the prior art to combine the prior art teachings does not have to be identical to that of the applicant to establish a prima facie case of obviousness. In re Kemps, 97 F.3d 1427, 1430, 40 U.S.P.Q.2d 1309, 1311 (Fed. Cir. 1996). As indicated supra, one of ordinary skill in the art would have had ample motivation to utilize the parylene coating in order to obtain good corrosion resistance.

Applicant next argues that parylene, although effective in preventing corrosion of a metal substrate, would be totally ineffective in preventing contamination buildup on the surface of the tip of a wire bonding capillary. While this, arguably, may be so, applicant does not claim it. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO**

Art Unit: 1725

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
